Safety & Security Handbook

Overview for
General Users

Gifu Prefecture Police Cybercrime Division

Cyber Security Public Awareness Initiative

Supported by
National Police Agency

Ministry of Economy,
Trade and Industry

Ministry of Internal Affairs
and Communications

IPA
Information Technology
Promotion Agency, Japan

Introduction

Be Aware of the Appropriate Minimum Cyber Security Measures

This handbook introduces cyber security measures and example cases of cybercrime. Be sure to take the necessary precautions to ensure you do not become a victim.

1

1 Make sure to always keep your operating system and software up-to-date

The latest versions of operating systems and software include measures to prevent the latest forms of cyber attacks, so be sure to always update.

2

**2 Use long, complex passwords,
and avoid using the same
password repeatedly**

FC%&D)hnvEy34%
TPkhFmRj-+

In order to create strong passwords, it is important to: 1) Use passwords at least 10 characters in length, and made up of a combination of capital letters, lowercase letters, numbers, and symbols, 2) Make sure you do not use the same or similar passwords in multiple places, and 3) Properly store passwords.

3 Use multi-factor authentication

Wherever possible, use multi-factor authentication, login notifications, and biometric authentication to enhance security.

④ Be careful of fake emails and
fake websites

Phishing scams come in many forms. We often forget to be as careful in times of distress, such as during natural disasters, so be sure to always remain aware of the ever-changing types of fake emails.

⑤ Be wary of email attachments
and URLs

Make sure you do NOT open any files or URLs sent from addresses you do not recognize.

6 Make sure to screen lock your smartphones and PCs

The first step to keeping your data safe on smartphones and computers is to set screen lock. Using biometric authentication is also recommended.

7 Be sure to backup (copy) all important data before it is lost

Even if you suffer a cyber attack, you can return things to normal with the appropriate backups.

8 Be cautious of loss or theft of
devices & screen-peeking

When using your devices in public, be aware of the risk of shoulder surfing, as well as loss or theft of your smartphone or computer.

9 Ask for help whenever you are
in trouble

If you suffer an attack and are unsure what to do, be sure to ask the help desk for assistance. If you suffer substantial damage, you may want to report it to the police and other relevant organizations. Make sure you know who and where to contact in advance, so you are ready in times of emergency.

Closing: Maintaining a Good Relationship with the Internet

Cyberspace is not an option of the real world

There are still dangerous areas on the internet

The internet does not yet have the social infrastructure our real world does

Safety & security is boosted when all of us encourage a wareness of cyber security
